NATIONAL SAFETY COUNCIL

Perspective

The appointment of safety officer remains a legal mandate in certain Indian factories and construction sites. Recognizing the crucial role of safety, many organizations proactively appoint safety officers or safety engineers, irrespective of legal requirements. To meet the demand for competent safety professionals, the National Safety Council (NSC) initiated the National Safety Aptitude Test (NSAT) in 2022. The exam aims to assist industries in screening prospective safety officers, engineers, and professionals.

Now, it has been accepted that safety does not remain only with the safety officers but is the responsibility of line function. Accordingly, organisations/establishments are proactively providing training to the line managers on safety and involving them in safety management system. NSAT will help to assess how well line managers are verse with OHS domain. Starting in 2023, NSAT has been extended to cover individuals working in the Oil & Gas and Construction industries.

About NSC

Established on March 4th, 1966, by the Ministry of Labour, Government of India, the National Safety Council is an independent, non-commercial, not for profit making, and autonomous society. As a pioneer in Occupational Safety and Health, NSC plays a pivotal role in fostering a culture of safer working environment in India.

About NSAT

The National Safety Aptitude Test (NSAT) is an online examination conducted by NSC to assess candidates' comprehensive understanding of safety science, safety laws, risk management, safety engineering/management, leadership abilities, and general aptitude. The NSAT score, valid for **two years**, reflects the candidate's performance in the occupational safety, health & environment field.

NSAT facilitates organizations in the selection and recruitment process of safety officers. Employers may consider NSAT scores when short-listing candidates for safety officer/engineer positions. Prospective safety professionals can showcase their competence by having a valid NSAT score.

NSAT also enables organizations to evaluate the occupational health and safety (OHS) competence of their current employees and measure the efficacy of the initiatives implemented in the OHS management system.

NSC does not guarantee employment opportunities for qualified candidates. NSAT is a voluntary initiative and is not intended to substitute regulatory qualification requirements for safety officers under any law.

Score Card

Candidates scoring 50% and above will receive a scorecard.
